

# Being green at BCEC

**We are committed to environmental and sustainable practices that reduce our footprint on the planet.**

BCEC has achieved earthcheck platinum accreditation, incorporating 13 years of rigorous recertification audits. The globally-recognised certification ensures the centre's compliance with the highest international environmental standards, including these integral programs.

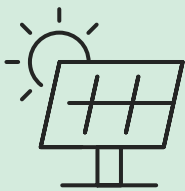

## Daylight harvesting

The installation of new LED lighting and a daylight harvesting system within the Centre's foyers, exhibition halls, and concourse has resulted in a 50% reduction in energy demand.

## Rainwater harvesting

BCEC captures 1,000,000 litres of rainwater, stored in 2 subterranean tanks. This harvested rainwater is then reticulated around the facility for sanitation and irrigation requirements.

## Going solar

A 764-solar-panel system supplies 40% of the base-load power requirements for the BCEC Grey Street Building, with further solar panel installation planned for the Centre.

## Food wastage

'Herbie', the Centre's organic dehydrator, helps reduce organic waste from the Centre's busy kitchens by up to 80%, turning waste into high concentrate soil fertiliser able to be used in the community across Brisbane.

## Recycling

In 2023, BCEC recycled 51% of all waste produced, well above industry standards.

# Sustainable partnerships

## Helping local charities

BCEC's participation in the Containers for Change recycling scheme has resulted in funds raised going to local charities and social enterprise groups, supporting those in need in our community and vital medical research.

## Creating awareness

BCEC is an Impact Partner with the EcoMarines Foundation, helping young students and their school communities learn about protecting our waterways, our marine environment, wildlife populations and the ecosystems that support them.

## Avoiding landfill

The Centre partners with Brisbane-based, world-leading textile recovery company, BlockTexx, that turns textiles into reusable resources to prevent them going to landfill

## Helping the nation

BCEC recycles lamps and batteries through Ecocycle, mercury recovery and recycling specialists, as a signatory to FluroCycle, which seeks to increase the national recycling rate of mercury-containing lamps on behalf of Australia's National Waste Policy.

## Helping those in need

Executive Chef, Matthew Arnold, is passionate about reducing food wastage - not only through sustainable practices, but also by partnering with local charities to help the city's most vulnerable people.

**Ongoing alliances with organisations doing good reinforces our commitment.**

**Our city, your canvas.**
